(57) **ABSTRACT**

The present invention provides a polybenzoxazole resin con-
taining a repeating unit represented by the following general
formula (1):

wherein R₁ is a tetravalent aromatic group; N atoms and O
atoms which are bonded to R₁ are present in the form of pairs
each consisting of an N atom and an O atom such that the N
atom and the O atom in each pair are respectively bonded to
adjacent two carbon atoms constituting the same aromatic
ring in R₁; R₂ is an alkanediyl group having 1 to 6 carbon
atoms; and n is an integer of 2 to 10000, which is excellent in
electrical insulating properties, heat resistance, mechanical
properties, physical properties, dimensional stability and the
like, as well as a polybenzoxazole precursor capable of pro-
ducing the polybenzoxazole resin which is excellent in solu-
bility in solvents and storage stability.
